

Data Mining and Visualization Intern

Improve training for the world's largest power meter test team: Team ZWATT using more data than anyone have had before.

Make engaging visualizations and gain new groundbreaking insights

Suitable for internship, project or thesis. Open now.

Design and implement novel data visualization methods with intuitive user interfaces on PC, web and mobile. Optimize training value, social media impact, nerd-factor and the product using the insights gained.

We expect

- Interest and experience with information visualization and visual analytics
- Knowledge of statistics and data mining techniques
- Strong programming skills and software developing experience
- Proficient with one or more APIs or platforms for visualization (e.g. JavaScript, D3.js, WebGL, HTML5)
- Strong research and problem solving skills
- Fluent in English

Why us

- Working in a startup is more fun
- Improve your skills working on a real project that is actually going to be used
- Learn to move fast and create results

Practical

- Full lunch buffet, gourmet coffee, fitness facilities, Friday bar etc. available
- All your bike gear might suddenly be much more interesting and less expensive
- Taking a ride may be part of the job if you like

Interested?

Send your CV/latest exam/grade results + a cover letter explaining why this is ideal for you to: ro@sensitivus.com as soon as possible.
